Part 4 of ISO 5167 covers three different manufacturing methods of classical Venturi tubes; as-cast, machined and fabricated. The general shape, Venturi profile, surface finish and bore requirements of Venturi for each of the three manufacturing methods are described in detail.

ISO 5167 will be divided into 4 parts: general (ISO 5167-1), orifice plates (ISO 5167-2), nozzles and Venturi nozzles (ISO

5167-3), and Venturi tubes (ISO 5167-4). Many users will only require the general part and one other part. The most significant areas of change from the existing ISO 5167-1 are given below.

ISO 5167-3:2003 also provides background information for calculating the flow-rate and is applicable in conjunction with the requirements given in ISO 5167-1. ISO 5167-3:2003 is applicable to nozzles and Venturi nozzles in which the flow remains

subsonic throughout the measuring section and where the fluid can be considered as single-phase.
