In all prior Selenium 101 posts, we used rather small and easily contained examples to implement our Selenium test cases. Unfortunately, this does not represent the real world usage that well. To get better and more maintainable tests we will need to come up with a better structure for our tests. The most commonly used design patterns are the Page Object Model and the in-build Page Factory Pattern.

One way of doing this is by using the Page Object test design pattern. Many of the contributors to Selenium and other selenium experts advocate using page objects. It is a good way to make test code more robust, readable and reusable. Knowing other design patterns is useful too and using them in your test framework is probably a good idea.
